

Port Arthur Talks

How heritage is handling climate change, here and abroad presented by Dr Caitlin Vertigan

This talk will review Dr Caitlin Vertigan's recent keynote presentation to the international Sea Change conference in Blackpool, a summary of what everyone else in the international heritage world is talking about in relation to responses to the impacts of climate change, and the places she visited after the conference that are facing similar challenges to us. Far from being an isolated voice at the bottom end of the earth, Tasmania is contributing substantially to the global conversation about how we navigate the challenges in cultural heritage associated with a rapidly changing environment.

Caitlin has worked for PAHSMA for many years, but she has also done things like: getting a PhD in marine ecology, working in Victoria on both marine and terrestrial ecological projects, extensive science communication, and bridging the gap between the heritage and the scientific worlds. She is currently employed as a Conservation Project Officer at PAHSMA where she looks after the natural values of our varied sites, and facilitates the research program.

ALL WELCOME!

Tuesday 17 March, 2020 at 5:00 p.m.

**Junior Medical Officer's Conference Room,
(building at the rear of the house)
Port Arthur Historic Site**
